S16 COMPRESSION FITTINGS - INTRODUCTION

S16 compression fittings for pressure piping applications are characterized by the Innovative Balance Sealing System Poseidon (pat pending): thanks to the new technical design it is possible to balance the sealing action towards the pipe through the different tightening of the nut. This leads to the maximum safety in all the possible conditions of use and quality of the pipe , keeping the basic features of easy and fast assembly without any particular preparation of the pipe.

Product range: d.16-110mm, all the common items for piping applications.

Main applications

Water supply, house connection and water treatment plants, sport plants irrigation and gardening, agriculture and horticulture irrigation.

Technical specifications

Materials:

top quality raw materials are used, this makes the S 16 fittings highly resistant and reliable in time, suitable for drinking water and environment compatible.

Body, nut, thrust ring: virgin polypropylene (PP-B), high mechanical resistance and thermal stability in course of time.
For coloured nuts, top UV resistant master-batch are used (grade 8- ASTM D2565)

Grip ring: copolymer polyacetal resin (POM) , white colour

Conical gasket: rubber NBR or EPDM, hardness 70sh, black colour

Reinforcement ring: only for female threads >= 1"1/2, stainless steel AISI 430

Standards

Dimensions, features and functional tests: UNI 9561, EN712 - EN713 - EN715 - EN911, ISO3458 – ISO3459 – ISO3501 – ISO3503 – ISO14236, ISO17885, DIN8076.3, AS/NZS 4129, BRL K534-03

Pipe compatibility, PE-HD (PE63-80-100), PE-LD, PEX-a: UNI10910, EN12201-1, ISO4427, DIN8072 – DIN8074, AS/NZS4130, BS6572 – BS6730, UNI7990

Sealing threads (male and female): EN10226-1 (ex ISO7/1), DIN2999.1, BS21, AS/NZS1722.1

Flange: ISO7005, DIN2501 – DIN8063.

Working temperature

-10 / +45°C

Nominal pressure (PN) and product approvals

S 16 fittings are designed and suitable to be used at PN16 pressure rate; fittings are tested and certified by major international approval institutions, such as DVGW (Germany), IIP (Italy), WM (Australia), Kiwa (Holland) Wras (UK), Acs (France), Sabs (Rsa), Eta (Denmark).

Working pressure and temperature

temperatura C°	-10 / +25°C	+26/+35 °C	+36/+45 °C
PN	16	12,5	10
PN	12,5	10	8
PN	10	8	6

Drinking water

Poseidon fittings are suitable to be in contact with potable water, according to the main international sanitary requirements, such as: Circolare n.102 del 2.12.1978, DM 21.3.1973 e DM174 del 6.4.2004 (Italy); Mitteilungen aus dem Bundesgesundheitsamt 108-109 mitteilung – KTW-D2 (Germany); Kiwa-ATA (Holland); AS4020 (Australia), FDA (USA), Bs6920 (UK).

RACCORDI A COMPRESSIONE S16 - GENERALITÀ'

I raccordi della linea S 16, destinati al trasporto di fluidi in pressione, sono caratterizzati dall' innovativo sistema di funzionamento Poseidon (pat pending) che rende possibile bilanciare l'azione di tenuta sul tubo agendo sul livello di avvitamento della ghiera: si ottiene in questo modo la massima sicurezza di funzionamento in tutte le possibili condizioni d'uso e caratteristiche qualitative del tubo. Il raccordo si caratterizza anche per il facile e veloce montaggio, che non richiede alcuna preparazione particolare del tubo. **Gamma prodotto:** range dimensionale d.16-110mm, tutte le diverse geometrie applicative.

Applicazioni principali

Distribuzione dell'acqua potabile ed impianti trattamento acque, irrigazione sportiva e da giardino, irrigazione agricola ed orticoltura.

Informazioni tecniche

Materiali:

per la produzione dei raccordi S 16 **si utilizzano materie prime di alta qualità** che conferiscono al raccordo caratteristiche di resistenza ed affidabilità nel tempo, idoneità al contatto con l'acqua potabile e compatibilità ambientale.

Corpi, ghiere ed anelli di spinta: polipropilene copolimero vergine (PP-B) ad alta resistenza meccanica ed elevato grado di stabilità nel tempo. Per le ghiere colorate si utilizzano master ad alta resistenza ai raggi UV (grado 8- ASTM D2565)

Anelli di graffaggio: resina poliacetalica (POM) copolimero neutro, colore bianco

Guarnizioni coniche: gomma NBR o EPDM, durezza 70sh, colore nero

Anelle di blindatura: solo sui filetti femmina >= 1"1/2, acciaio inox AISI 430

Standards di riferimento

Dimensioni, caratteristiche e test funzionali: UNI 9561, EN712 - EN713 - EN715 - EN911, ISO3458 – ISO3459 – ISO3501 – ISO3503 – ISO14236, ISO17885 , DIN8076.3, AS/NZS 4129, BRL K534-03

Compatibilità tubi PE-HD (PE63-80-100), PE-LD, PEX-a: UNI10910, EN12201-1, ISO4427, DIN8072 - DIN8074, AS/NZS4130, BS6572 – BS6730, UNI7990

Filetti di tenuta idraulica (maschio e femmina): EN10226-1 (ex ISO7/1), DIN2999.1, BS21, AS/NZS1722.1

Flange: ISO7005, DIN2501 – DIN8063.

Temperatura di utilizzo

-10 / +45°C

Pressione nominale (pn) e marchi di qualità

I raccordi della linea S 16 sono progettati ed idonei all'utilizzo con requisito PN16; sono testati ed approvati dai principali istituti internazionali di certificazione come il DVGW (Germania), IIP (Italia), WM (Australia), Kiwa (Olanda), Wras (UK), Acs (Francia), Sabs (Sud Africa), Eta (Danimarca).

Pressione massima di esercizio al variare della temperatura di utilizzo

temperatura C°	-10 /+25°C	+26/+35 °C	+36/+45 °C
PN	16	12,5	10
PN	12,5	10	8
PN	10	8	6

Acqua potabile

I raccordi S16 sono idonei al contatto con l'acqua potabile secondo le vigenti prescrizioni internazionali : Circolare n.102 del 2.12.1978, DM 21.3.1973 e DM174 del 6.4.2004 (Italia); Mitteilungen aus dem Bundesgesundheitsamt 108-109 mitteilung – KTW-D2 (Germania); Kiwa-ATA (Olanda); AS4020 (Australia), FDA (USA), Bs6920 (UK).

S16 COMPRESSION FITTINGS - ASSEMBLY INSTRUCTIONS

1. Pipe preparation and nut unscrew

Cut the pipe square and remove the burrs; we suggest to chamfer it for $d \geq 75\text{mm}$. Unscrew the nut to the last thread, leave it on the fitting while inserting the pipe.

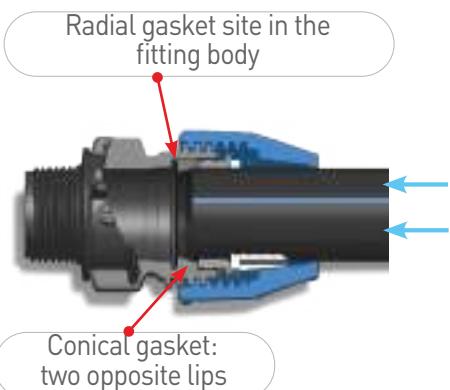

2. Pipe insertion up to the first pipe stop

Twist the pipe into the fitting through the grip ring till the first stop: the pipe has reached the conical gasket

Balance sealing system

The conical gasket has two opposite lips that allows:

- The easier pipe insertion
- The right placing of the gasket in the body radial site
- The better adaptability of the gasket towards the body and the pipe wall (large contact pipe surface)

3. Pipe insertion up to the body pipe stop

Push the pipe through the gasket till the second stop, You have reached the pipe stop ribs of the fitting.

Balance sealing system

The radial body site and the conical gasket are designed to keep the gasket lightly up in the site: after the pipe insertion it doesn't reach directly the body pipe stop, it also remains a little raised from the pipe stop thanks to the internal ribs in the body

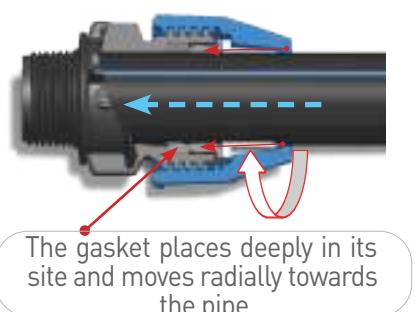

4. Screwing the nut

Tighten the nut firmly, by hand or standard tool up to 32mm, by standard tool or dedicated Supreme wrench for $d \geq 40\text{mm}$; the pipe moves to the very final body stop

Balance sealing system

By tightening the nut it works on the thrust ring that push the gasket, meanwhile the pipe is moving to the final stop in the body: the gasket can deeply place in its site also moving radially and increasing its compression towards the pipe wall, as much as it's possible in relation to the dimensional and geometrical features of the pipe. In this way, acting on the tightening level of the nut, it is possible to realize a system able to balance pipe defects such as undersize, ovalization and little rules

ISTRUZIONI DI MONTAGGIO - RACCORDI A COMPRESSIONE S16

1. Preparazione del tubo e svitamento della ghiera

Tagliare il tubo in squadro eliminando eventuali bave ; si consiglia di smussare il tubo per $d \geq 75\text{mm}$. Svitare la ghiera fino all'ultimo filetto, senza rimuoverla dal raccordo

2. Inserimento del tubo fino al primo arresto

Inserire il tubo nel raccordo superando l'anello di graffaggio fino al primo arresto: il tubo ha raggiunto l'imbocco della guarnizione conica

Balance sealing system

La guarnizione ha due labbi opposti che permettono :

- facile inserimento del tubo
- corretto posizionamento della guarnizione nella sede raggiata del corpo
- migliore adattabilità della guarnizione verso il corpo e verso la parete del tubo (larga superficie di contatto col tubo)

3. Inserimento del tubo fino alla battuta tubo

Inserire il tubo a fondo attraverso la guarnizione fino al secondo arresto, si sono raggiunte le nerve sulla battuta del tubo

Balance sealing system

La sede raggiata nel corpo e la guarnizione conica sono progettate per mantenere la guarnizione leggermente sollevata nella sede: dopo il montaggio il tubo non raggiunge direttamente la battuta nel corpo ma rimane anch'esso leggermente sollevato grazie alle nervi interne

4 . Avvitamento della ghiera

Serrare a fondo la ghiera, a mano o con chiavi standard fino al d.32mm, con chiavi standard o con chiavi dedicate Supreme per $d \geq 40\text{mm}$; il tubo si muove fino alla battuta finale nel corpo (tubo a fine corsa)

Balance sealing system

Avvitando la calotta questa lavora sull'anello di spinta che preme a sua volta sulla guarnizione mentre il tubo si muove verso la battuta finale nel corpo: la guarnizione può posizionarsi a fondo nella sua sede muovendosi anche radialmente ed aumentando la compressione verso la parete del tubo, tanto più quanto è possibile in relazione alle caratteristiche dimensionali e geometriche del tubo stesso. In questo modo, agendo sul livello di avvitamento della calotta, è possibile realizzare un sistema in grado di compensare difettosità del tubo come sottodimensionamenti, ovalizzazioni e leggere rigature

LATEST RELEASE
ULTIMA VERSIONE

UNIVERSAL FITTINGS – RACCORDI UNIVERSALI

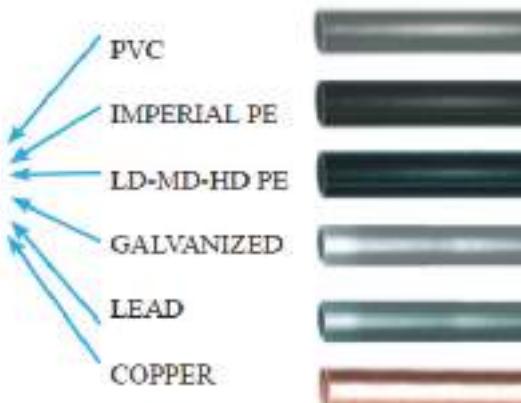

The Supreme Universal Fittings offers the ideal solution to connect plastic or metal pipes.

I Raccordi Universali Supreme offrono la soluzione ideale per collegare tubi in plastica o metallo.

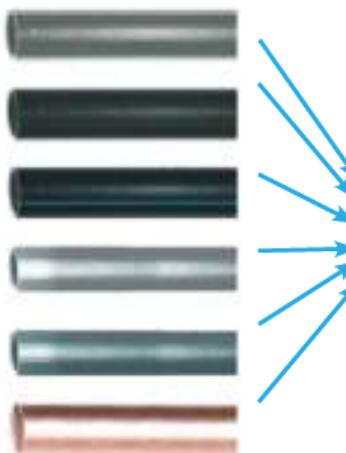

Pe Outlet

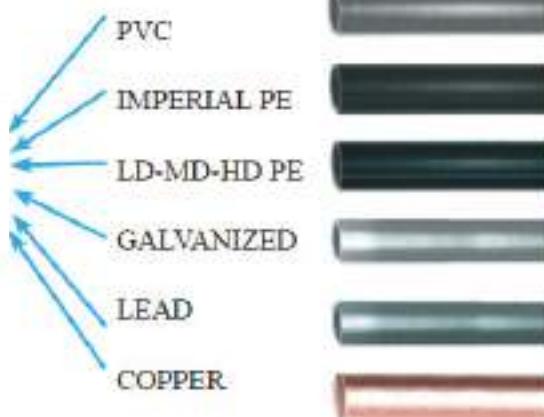

Universal Outlet

Universal Outlet

Universal Outlet

Features

- PP-B body and EPDM gasket
- Working Pressure at 20°C PN16
- SS grippers incorporated in the clamp ring to provide pull-out resistance
- Kit available to provide universal outlets starting from standard fittings
- No special tools required
- Suitable for LEAD, COPPER, ZINC PLATED AND PLASTIC PIPES

Caratteristiche

- Corpo in PP-B, guarnizione in EPDM
- Pressione Nominale a 20°C PN16
- Dentini in acciaio inox incorporati nell'anella di graffaggio per resistere allo sfilamento
- Disponibile kit per ottenere uscita universale a partire da raccordo standard
- Per il montaggio non occorrono attrezzi dedicati
- Adatti per tubi in PIOMBO, RAME, ACCIAIO ZINCATO e PLASTICA.

UNIVERSAL KIT ASSEMBLY INSTRUCTION
ISTRUZIONI DI ASSEMBLAGGIO DEL KIT UNIVERSALE

The Universal kit allows to transform any metric offtake of standard supreme fittings into an universal one. The steps involved in the assembly of the components are:

Il Kit universale permette di trasformare l'uscita del raccordo standard per tubo PE metrico in uscita universale. A seguire i passaggi per l'assemblaggio dei componenti:

2.insert the universal sealing ring(4) in the body(5) until the upper edge is like in the picture above. Due to the existing friction, sealing ring insertion may require and additional effort

2.inserire la guarnizione universale (4) nel corpo (5) come da figura di sopra. A causa della frizione esistente tra il corpo e la guarnizione l'inserzione può richiedere un certo sforzo.

3.Place the universal insert (3) so that it is positioned above the sealing ring like in the above picture

3.Posizionare l'inserto universale (3) al di sopra della guarnizione come nella foto di sopra

4.Place the universal grip ring (2) above the insert (3) as from the above picture

4.Posizionare l'anello di graffaggio come nella figura di sopra

5.Place the universal nut (1) and tighten clockwise by just one screw thread, leaving it prepared for pipe insertion. Do not screw the universal nut without pipe

5.Posizionare la calotta universale (1) ed avvitare a fondo in senso orario per circa un giro, lasciandola così pronta per l'inserzione del tubo. Non avvitare la calotta universale senza che il tubo sia inserito

SUPREME UNIVERSAL FITTING ASSEMBLY INSTRUCTION

ISTRUZIONI DI ASSEMBLAGGIO

1. Cut the pipe at a 90-degree angle (square cut). When possible it is recommended to bevel the edges of the cut in order to make the insertion easier

1. Tagliare il tubo a 90°. Quando possibile si raccomanda di eliminare bave evidenti per rendere l'insertione più facile e sicura

2. Slacken the nut without removing from the body. In case the internal components are disassembled (for example due to its transport) please follow the assembly instructions for the kit components

2. Allentare la ghiera senza rimuoverla dal corpo. Se i componenti non sono assemblati (ad es. a causa del trasporto) seguire le istruzioni per l'assemblaggio dei componenti interni del kit

3. Insert the pipe without tightening the nut. Push the fitting until the pipe reaches the stop

3. Inserire l'estremità del tubo senza avvitare la ghiera. Spingere il raccordo finché il tubo non arriva alla battuta

4. Hand tighten the nut and then tighten further with a proper standard tool. Do not screw the universal nut without pipe

4. Avvitare la ghiera manualmente, procedere poi al serraggio meccanico con appropriata chiave standard. Non avvitare la ghiera dell'uscita universale con tubo non inserito.

COPPER KIT ASSEMBLY INSTRUCTION ISTRUZIONI ASSEMBLAGGIO KIT RAME

Starting with a standard metric compression fitting:

1. Remove the standard nut
2. Remove all internal components
3. insert component A
4. insert component B
5. lubricate component B
6. insert component C
7. insert component D
8. insert component E
9. put the copper color NUT on the body
10. pipe assembly: see next pg

Partendo da un raccordo a compressione standard metrico:

1. Rimuovere la calotta standard
2. Rimuovere dal corpo i componenti interni
3. inserire il componente A
4. inserire il componente B
5. lubrificare il componente B
6. inserire il componente C
7. inserire il componente D
8. inserire il componente E
9. avvitare sul corpo la calotta color rame CAL
10. montaggio tubo: vedi la prossima pagina

Pipe Installation/Installazione tubo

Chamfer the copper pipe end. Mark the pipe portion to be inserted into the fitting.

Smussare l'estremità del tubo di rame. Marcare la porzione di tubo che dovrà essere inserita nel raccordo.

Unscrew the nut without removing from the body and twist the copper pipe through the fitting, up to the pipe stop.

Svitare la ghiera senza rimuoverla dal corpo ed inserire in modo rotatorio il tubo di rame fino alla battuta centrale.

Tighten the nut firmly, use a wrench for final tightening.
Serrare a fondo la ghiera, utilizzare una chiave per il serraggio finale.

COMPRESSION TANK ADAPTOR D.32X1"

NEW

code	DESCRIPTION	€
009603200DS	Tank male adaptor 32X1	9,20
GBNL25	Large nylon backnut 25X1	2,63
GWLR25	Large rubber washer 25X1	2,35
GWLP25	Large poly washer 25X1	1,76

TANK - COMPRESSION FITTING Ø 32X1": ASSEMBLY INSTRUCTIONS

1. Remove teh BACK NUT and the POLY SLIP WASHER (the firmer of the two washers). The RUBBER SEALING WASHER must be placed on the fitting thread.
2. Slide the TANK FITTING THREAD through the hole in the tank. The SEALING WASHER, must be between the FITTING BODY FLANGE and the TANK WALL (ensure that the rins on the rubber SEALING WASHER are sealing against the tank wall).
3. On the INSIDE of the tank wall, slide the POLY SLIP WASHER back on the TANK FITTING THREAD and then screw on the BACK NUT.
4. Firmly tighten the BACK NUT until the face of both the SLIP and SEALING WASHERS make a full contact with the inside-outside tank wall in order to obtain the suitable tight seal.

NOTE: Ensure to comply with the tank manufacturer specifications.

GENERALITÀ

I raccordi della linea **Easyfit**, destinati al trasporto di fluidi in pressione, sono caratterizzati dall' innovativo sistema di funzionamento Poseidon che rende possibile bilanciare l'azione di tenuta sul tubo agendo sul livello di avitamento della ghiera: si ottiene in questo modo la massima sicurezza di funzionamento in tutte le possibili condizioni d'uso e caratteristiche qualitative del tubo. Il raccordo si caratterizza anche per il facile e veloce montaggio, che non richiede alcuna preparazione particolare del tubo.

Gamma prodotto: range dimensionale d.16-110mm, tutte le diverse geometrie applicative.

Informazioni tecniche

Materiali: per la produzione dei raccordi Easyfit si utilizzano materie prime di alta qualità che conferiscono al raccordo caratteristiche di resistenza ed affidabilità nel tempo, idoneità al contatto con l'acqua potabile e compatibilità ambientale.

Corpi, ghiere ed anelli di spinta: : polipropilene copolimero vergine (PP-B) ad alta resistenza meccanica ed elevato grado di stabilità nel tempo. Per le ghiere colorate si utilizzano master ad alta resistenza ai raggi UV (grado 8- ASTM D2565)

Anelli di graffaggio: resina poliacetalica (POM) copolimero neutro, colore bianco

Guarnizioni coniche: gomma NBR, durezza 70sh, colore nero

Anelle di blindatura: solo sui filetti femmina >= 1"1/4, acciaio inox AISI 430

Standards di riferimento

Dimensioni, caratteristiche e test funzionali: UNI 9561, EN712 - EN713 - EN715 - EN911, ISO3458 – ISO3459 – ISO3501 – ISO3503 – ISO14236, ISO17885, DIN8076.3, AS/NZS 4129.

Compatibilità tubi PE-HD (PE63-80-100), PEX-a: : UNI10910, UNI7990, EN12201-1, ISO4427, DIN8072 - DIN8074, AS/NZS4130, BS6572 – BS6730

Filetti di tenuta idraulica (maschio e femmina): EN12226-1 (ex ISO7/1), DIN2999.1, BS21, AS/NZS1722.1

Flange: ISO7005, DIN2501 – DIN8063.

Temperatura di utilizzo

-10 / +45°C

Pressione nominale (pn) e marchi di qualità

I raccordi della linea Easyfit sono progettati ed idonei all'utilizzo con requisito PN16;

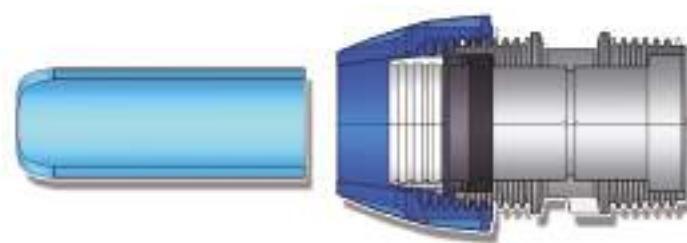

Pressione massima di esercizio al variare della temperatura di utilizzo

temperatura C°	-10 /+25°C	+26/+35 °C	+36/+45 °C
PN	16	12,5	10
PN	12,5	10	8
PN	10	8	6

Acqua potabile

I raccordi Easyfit sono idonei al contatto con l'acqua potabile secondo le vigenti prescrizioni internazionali : Circolare n.102 del 2.12.1978, DM 21.3.1973 e DM174 del 6.4.2004 (Italia); Mitteilungen aus dem Bundesgesundheitsamt 108-109 mitteilung – KTW-D2 (Germania); Kiwa-ATA (Olanda); AS4020 (Australia) ecc.

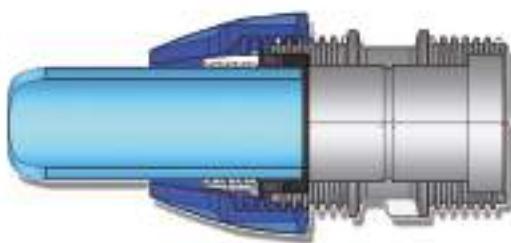

Istruzioni di montaggio - assembly instructions (1-2)

1. Tagliare il tubo a quadro eliminando eventuali bave, si consiglia di smussare il tubo per d.>= 75mm.

Svitare la ghiera fino all'ultimo filetto, senza rimuoverla dal raccordo.

1. Cut the pipe square and remove the burrs; we suggest to chamfer it for d.>=75mm. Unscrew the nut to the last thread, leave it on the fitting while inserting the pipe.

2. Inserire il tubo superando l'anello di graffaggio fino al primo arresto: il tubo ha raggiunto l'imbocco della guarnizione conica.

2. Twist the pipe into the fitting through the grip ring till the first stop: the pipe has reached the conical gasket.

INTRODUCTION

Easyfit compression fittings for pressure piping applications are characterized by the Innovative Balance Sealing System Poseidon: thanks to the new technical design it is possible to balance the sealing action towards the pipe through the different tightening of the nut. This leads to the maximum safety in all the possible conditions of use and quality of the pipe , keeping the basic features of easy and fast assembly without any particular preparation of the pipe.

Product range: d.16-110mm, all the common items for piping applications.

Technical specifications

Materials: top quality raw materials are used, this makes the Easyfit fittings highly resistant and reliable in time, suitable for drinking water and environment compatible.

Body, nut, thrust ring: virgin polypropylene (PP-B), high mechanical resistance and thermal stability in course of time.

For coloured nuts, top UV resistant master-batch are used (grade 8- ASTM D2565)

Grip ring: copolymer polyacetal resin (POM) , white colour

Conical gasket: rubber NBR, hardness 70sh, black colour

Reinforcement ring: only for female threads >= 1"1/4, stainless steel AISI 430

Standards

Dimensions, features and functional tests: UNI 9561, EN712 - EN713 - EN715 - EN911, ISO3458 – ISO3459 – ISO3501 – ISO3503 – ISO14236, ISO17885, DIN8076.3, AS/NZS 4129.

Pipe compatibility, PE-HD (PE63-80-100), PEX-a: UNI10910, UNI7990, EN12201-1, ISO4427, DIN8072 - DIN8074, AS/NZS4130, BS6572 – BS6730

Sealing threads (male and female): EN12226-1 (ex ISO7/1), DIN2999.1, BS21, AS/NZS1722.1

Flanges: ISO7005, DIN2501 – DIN8063.

Working temperature

-10 / +45°C

Nominal pressure (PN) and product approvals

Easyfit fittings are designed and suitable to be used at PN16 pressure rate.

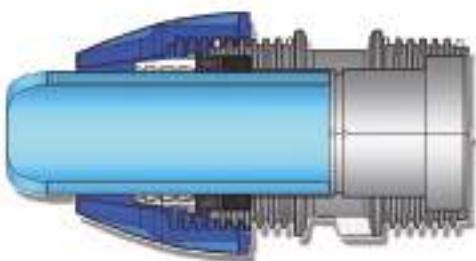

Working pressure and temperature

temperature C°	-10 /+25°C	+26/+35 °C	+36/+45 °C
PN	16	12,5	10
PN	12,5	10	8
PN	10	8	6

Drinking water

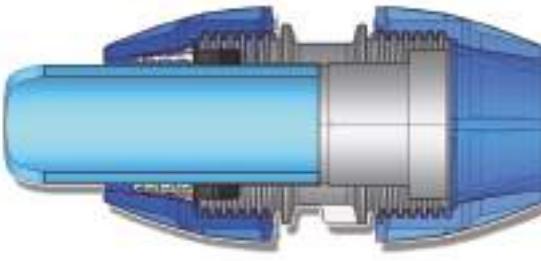

Easyfit fittings are suitable to be in contact with potable water, according to the main international sanitary requirements, such as: Circolare n.102 del 2.12.1978, DM 21.3.1973 e DM174 del 6.4.2004 (Italy); Mitteilungen aus dem Bundesgesundheitsamt 108-109 mitteilung – KTW-D2 (Germany); Kiwa-ATA (Holland); AS4020 (Australia), FDA (USA).

Istruzioni di montaggio - assembly instructions (3-4)

3. Inserire il tubo a fondo, fino al secondo arresto: si è raggiunta la battuta nel raccordo, il tubo è a fine corsa.

3. Push the pipe through the gasket till the second stop:
You have reached the pipe stop of the fitting

4. Avitare la ghiera serrandola a fondo, a mano o con chiavi standard fino al d.32mm, con chiavi standard oltre d.= 40

4. Tighten the nut firmly, by hand or standard tool up to 32mm, by standard tool for d.= 40

INSTALLATION - INSTALLAZIONE

Chamfer and clean the PE pipe ends, lubricate the seals with liquid soap, never lubricate pipe ends.

Insert pipes into fitting by using the inserting device, taking care that the ends meet the pipe stopper.

Smussare e pulire l'estremità del tubo in PE, lubrificare la guarnizione con sapone liquido, non lubrificare mai il tubo. Inserire il tubo nel manicotto fino alla battuta interna, utilizzando l'apposito inseritore.

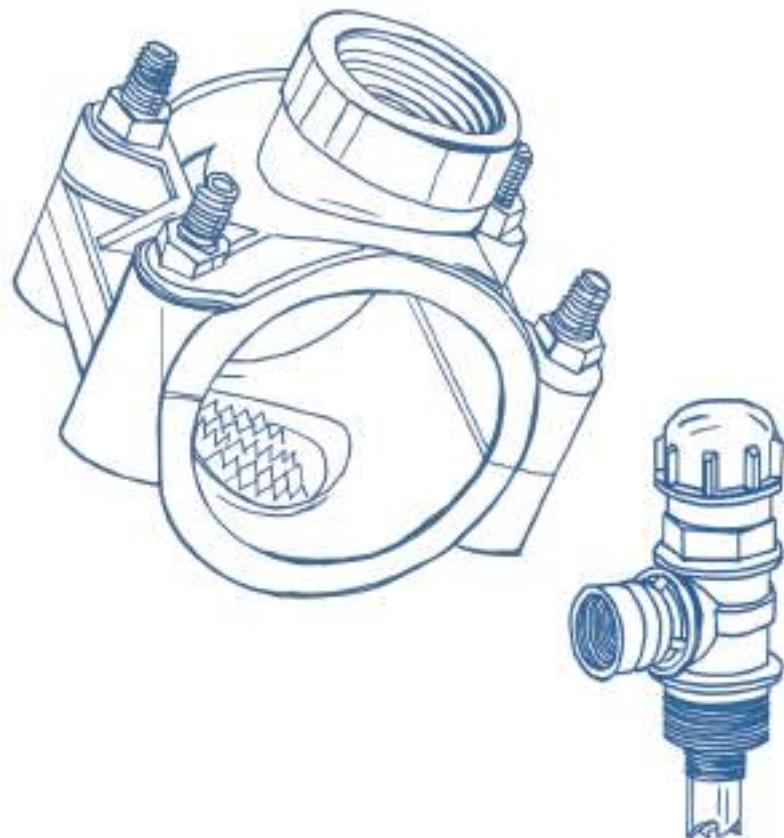

Clamp Saddles

Clamp Saddles

CLAMP SADDLES 0150 (ex S160) & 0154 (ex S161)

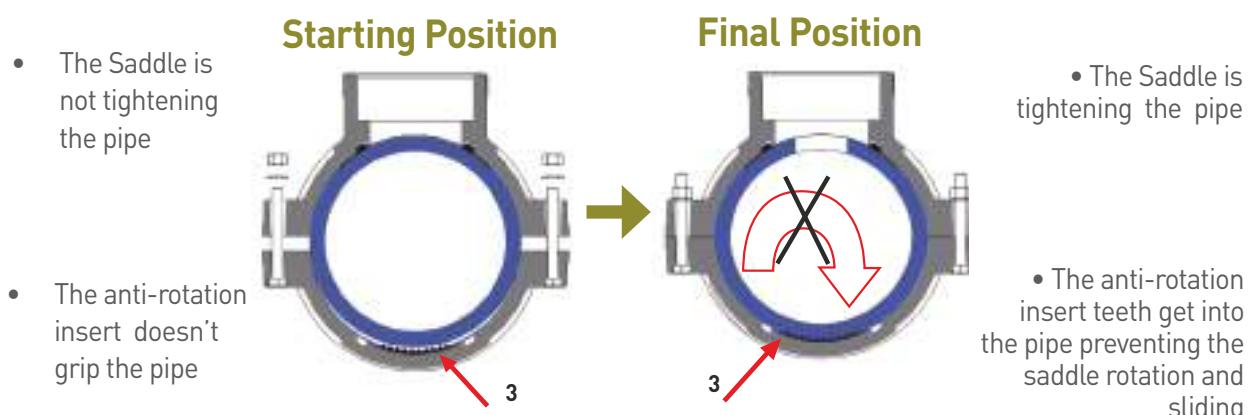

Technical features

- Suitable to be used with PE and PVC metric pipes
- Material: grey Polypropylene copolymer PP-B
- Reinforcement ring in stainless steel (1): maximized height to increase pressure tightening in case of bending moment applied to the outlet and vibrations steady in time
- Zinc plated bolts for model S160, stainless steel for model S161
- Flat gasket in NBR 70sh (2): maximized internal diameter in order to increase the working confidence (better containment of the pipe drill-hole); flat extension to increase the contact surface with the pipe leading the better performance in case of un wanted extra-pressure (water hammer)
- Bolts grip system
- Gasket grip system
- Patented anti-rotation system Octopus : the innovative insert (3) works very effectively and long lasting against rotation and axial slide of the saddle, suitable to grip different type of PE 80-100 pipes with no risk of damage.
- Reference norms: ISO13460 – AS/NZS4129 etc; threads according to EN10226 (ex ISO7/1)
- Main applications: top quality irrigation, potable water pipelines, fire fighting equipments

“Octopus” Antirotation System

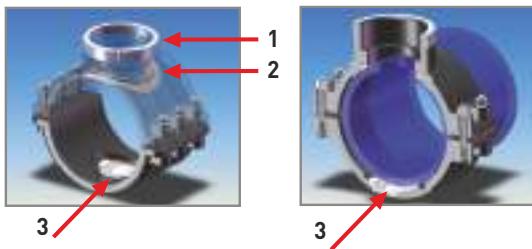

Patented anti-rotation system Octopus: the innovative insert (3) works very effectively and long lasting against rotation and axial slide of the saddle, suitable to grip different type of PE 80-100 pipes with no risk of damage.

PRESE A STAFFA 0150 (ex S160) & 0154 (ex S161)

Caratteristiche tecniche

- Adatte all'utilizzo con tubo PE e PVC metrico
- Materiale: Polipropilene copolimero PP-B
- Colore: grigio
- Anello di rinforzo in acciaio inox (1): massimizzata l'altezza per aumentare la resistenza alla pressione in presenza di momenti flettenti e vibrazioni applicate alla derivazione filettata
- Bulloni zincati per le staffe S160, acciaio inox per le staffe S161
- Guarnizione a sella in NBR 70sh (2): massimizzato il diametro per un miglior contenimento della foratura-tubo; estensione piatta per garantire la tenuta anche di presenza di sovra-pressioni indesiderate (colpi d'ariete)
- Sistema di blocco della vite.
- Sistema di trattenuta della guarnizione
- Sistema antirottazione brevettato Octopus : l'innovativo inserto (3) funziona in maniera efficace e durevole contro rotazione e slittamento della staffa sul tubo, è adatto per i diversi tubi in PE 80-100 senza rischi di danneggiamento.
- Normative di riferimento: ISO13460 – AS/NZS4129 etc; filetti secondo EN10226 (ex ISO7/1)
- Principali applicazioni: irrigazione qualificata, acquedottistica, antincendio.

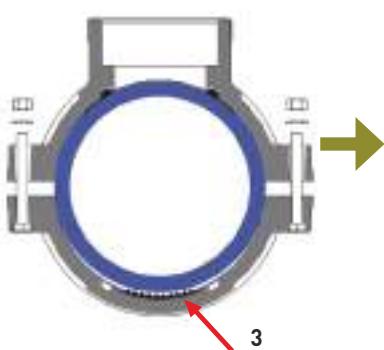

Sistema Antirotazione “Octopus”

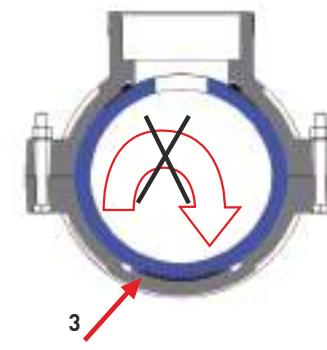

Sistema antirottazione brevettato Octopus: l'innovativo inserto (3) funziona in maniera efficace e durevole contro rotazione e slittamento della staffa sul tubo, è adatto per i diversi tubi in PE 80-100 senza rischi di danneggiamento.

- la staffa non è serrata sul tubo
- l'inserto antirottazione si appoggia sul tubo senza penetrarlo

Posizione iniziale

Posizione finale

- la staffa è stretta sul tubo
- i denti dell'inserto antirottazione penetrano nel tubo evitando rotazione e slittamento della staffa

CLAMP SADDLES 0148 (EX S159) – PRESE A STAFFA 0148 (EX S159)

Non Reinforced with zinc plated bolts PN 12,5 Clamp Saddles
Prese a staffa PN 12,5 non rinforzate e con bulloni zincati

Technical features

- Material: grey Polypropylene copolymer PP-B
- Zinc plated bolts
- O-ring gasket in NBR 70sh: maximized internal diameter in order to increase the working confidence (better containment of the pipe drill-hole)
- Bolts grip system
- Gasket grip system
- Reference norms: ISO13460 – AS/NZS4129 etc; threads according to EN10226 (ex ISO7/1)
- Main applications: Irrigation

Caratteristiche tecniche

- Materiale: Polipropilene copolimero PP-B
- Colore: grigio
- Bulloni zincati
- Guarnizione ad O-ring in NBR 70sh: massimizzato il diametro per un miglior contenimento della foratura
- Sistema di blocco della vite
- Sistema di trattenuta dell' O-ring
- Normative di riferimento: ISO13460 – AS/NZS4129 etc; filetti secondo EN10226 (ex ISO7/1)
- Principali applicazioni: Irrigazione

Non Reinforced with zinc plated bolts PN 12,5 Clamp Saddles Prese a staffa PN 12,5 non rinforzate e con bulloni zincati

CLAMP SADDLES ASSEMBLY INSTRUCTIONS

1. Checking components

Check that all the saddles components are present; saddles for metric pipes are AVAILABLE FROM 25 UP TO 315mm, supplied with 2, 4 or 6 bolts depending on pipe diameter, with standard OR or Flat OR, with or without metal reinforcing ring on the branch outlet, with or without anti-rotational insert (patented), with zinc plated or stainless steel bolts and nuts, depending on different models

2. Placing the gasket

Place the gasket into its site in the branch outlet

3. Placing the anti-rotation insert

Place the anti-rotation insert into its site in the lower part of the saddle (0150-0154 models); it has to be placed only with PE pipes, with PVC pipe is useless

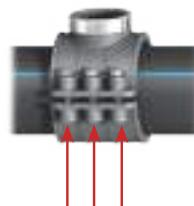

4. Placing the lower part of the Saddle

Place the lower part of the saddle on the pipe in correspondence of the area chosen for the derivation; line up the branch outlet in its final position. (*)

5. Inserting the bolts from below in the lower part

Insert the bolts from below in the lower part, preferably in diagonal sequence to simplify the lining up of the two parts; bolts are locked by means of suitable ribs to prevent their fall. Screw the nuts not in depth, till an easy rotation on the pipe is avoided .(++)

6. Drilling through the pipe

Drill through the pipe using a suitable tool to avoid pipe deformation and leaks under the gasket. (***)

7. Connecting the male threaded adaptor

Connect the male threaded adaptor on the branch outlet thread and, AFTER THAT, complete the tightening of the bolts-nuts (diagonal sequence) till the two parts of the saddle are in contact (this is valid up to 160mm saddles, for bigger sizes tighten the nuts until a suitable draught). (****)

(*): pt.4-5] as an alternative in case of narrow installing conditions , insert at first the bolts on the lower part, place it on the pipe and align the upper part on to the bolts.

(**): in this phase do not tighten the nuts in depth, to avoid even slight ovalizations of the female off-take that could cause difficulties in male thread screwing (pt.7)

(***): drilling of the pipe can be done in advance depending on working conditions and attitude of the installers.

(****): tighten till the upper part is well compressed on the pipe and resistance to the nut screwing has become high.

ISTRUZIONI DI MONTAGGIO STAFFE

1. Controllo dei componenti

Controllare che tutti i componenti della staffa siano presenti ; le staffe per tubo metrico sono disponibili dal 25 al 315mm, con 2, 4 o 6 bulloni a seconda del diametro nominale, con OR standard o con OR a sella, con o senza anello di rinforzo sul filetto, con o senza inserto antirotazione-tubo (brevettato), con bulloni zincati od in acciaio inox, in relazione ai diversi modelli.

2. Posizionamento guarnizione

Posizionare la guarnizione nella sede della parte filettata

3. Posizionamento inserito antirotazione

Posizionare l'inserto antirotazione nella sede dalla parte inferiore della staffa (modelli 0150-0154); usare solo per tubo PE, inutile per tubo PVC

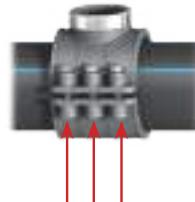

4. Posizionamento parte inferiore staffa

Posizionare la parte inferiore della staffa sul tubo in corrispondenza dell'area scelta per la derivazione; allineare la parte filettata alla parte inferiore nella posizione finale. (*)

5. Inserimento delle viti

Inserire le viti da sotto nella parte inferiore della staffa, preferibilmente con sequenza diagonale per semplificare l'allineamento delle due parti ; le viti sono trattenute nella staffa per mezzo di nervi che ne prevengono la caduta. Avvitare i dadi NON a fondo, quanto basta per evitare una facile rotazione della staffa. (**)

6. Foratura del tubo

Forare il tubo usando un utensile idoneo ad evitare deformazioni del tubo e successive perdite dalla guarnizione. (***)

7. Collegamento adattatore maschio

Collegare l'adattatore maschio e, SOLO DOPO, completare il serraggio delle viti (in sequenza diagonale) fino a che le due parti della staffa sono in contatto (questo vale per staffe fino a 160mm, per diametri maggiori serrare i dadi fino all'idoneo tiraggio della staffa. (****)

(*): pt.4-5] come alternativa in caso di installazioni in spazi ristretti , pre-inserire le viti nella parte inferiore della staffa, posizionarla sul tubo ed allineare sulle viti la parte filettata .

(**): in questa fase non serrare i dadi a fondo, per evitare anche leggere ovalizzazioni del filetto femmina della parte superiore che potrebbero causare difficoltà nell'accoppiamento dell'adattatore maschio (pt.7).

(***): la foratura del tubo può essere eseguita in anticipo a seconda delle condizioni di lavoro e dell'abitudine dell'installatore.

(****): serrare le viti finchè la parte filettata non è ben compressa sul tubo e la resistenza all'avvitamento diventa elevata.

PVC Fittings - Raccordi PVC

Introduction

Supreme offers an high level guarantee for all its PVC Fittings for pressurized fluid handling applications. The extensive range of sizes and combinations we offer will accommodate any system design. The dimensions of our fittings comply with UNI-EN 1452-3, DIN 8063.

Features & advantages

Description

- PVC fittings for pressure piping applications.

Size range

- From Ø 20 to Ø 400

Standards

- Dimensions and characteristics according to EN 1452-3.
- To be installed on PVC pipes conforming to EN 1452-2.

Working pressure

- 20°C Ø 20 - Ø 160 : PN 16
- 20°C Ø 200 - Ø 315 : PN 10
- 20°C Ø 400 : PN 6

Features

- Perfect sealing under all conditions.
- Strength. Supreme fittings offer both high impact and high tensile strength.
- Chemical resistance. PVC fittings are resistant to a wide range of chemicals.
- Durability.
- Easy assembly

Introduzione

Supreme offre un alto livello di affidabilità su tutti i raccordi in PVC per applicazioni di trasmissione di fluidi in pressione. L'ampia gamma prodotti in termini di misure e combinazioni che offriamo, garantisce una soluzione per ogni necessità applicativa. Le dimensioni dei raccordi sono in conformità con UNI-EN 1452-3, DIN 8063.

Caratteristiche e vantaggi

Descrizione

- Raccordi in PVC per applicazioni di trasmissione fluidi in pressione.

Gamma

- Da Ø 20 a Ø 400

Standards

- Dimensioni and caratteristiche conformi a EN 1452-3.
- Da installare su tubi PVC conformi a EN 1452-2.

Pressione nominale

- 20°C Ø 20 - Ø 160 : PN 16
- 20°C Ø 200 - Ø 315 : PN 10

- 20°C Ø 400 : PN 6

Vantaggi

- Perfetto sealing in tutte le condizioni.
- Robustezza.
- Resistenza chimica. I raccordi PVC sono resistenti a un vasto numero di agenti chimici.
- Durata nel tempo.
- Facilità di assemblaggio

PVC Fittings - Raccordi in PVC

Solvent cement range - Gamma ad incollaggio

PVC-U CLEANER
DETERGENTE PER PVC-U

CONNECTION OF U-PVC PIPE

MONTAGGIO DEL TUBO IN PVC-U

1. Pipe glueing area has to marked according to solvent cement socket connection lenght. Preliminary check of pipe and fitting socket connection is suggested before glueing.

1. L'area di incollaggio del tubo deve essere marcata sul tubo in accordo con la profondità bicchiere del raccordo. Prima di incollare si suggiere la verifica dell'accoppiamento dimensionale tra tubo e bicchiere del raccordo

2. Clean the fitting surface to be glued by liquid cleaner, to remove dust, oil and other impurities.

2. Pulire le parti interne del raccordo da incollare con detergente liquido per rimuovere le impurità superficiali.

3. On both of two pipe parts, glueing area have to rubbing with sandpaper. After rubbing process, glueing areas have to be cleaned by liquid cleaner and to be dry.

3. Carteggiare la zona esterna di saldatura del tubo e la sua estremità interna, pulire il tubo con idoneo detergente liquido ed asciugare bene.

4. Solvent Cement has to be applied on two glueing areas with a clean brush , longitudinal way. In case of pouring excess glue should be taken back into the glue can.

4. La colla deve essere applicata sulle due parti da incollare con idoneo pennello, in modo longitudinale. La colla in eccesso deve essere rimessa nel barattolo.

5. After correct application of glue, the two parts must be pushed each other with no stop, straight and very quickly.Keep parts in this position for a short time, till they start connect one each other.

5. Spingere tubo e raccordo contemporaneamente senza rotazioni e trattenendolo seguendo il corretto allineamento: tenerli in questa posizione per un breve periodo finché le parti non iniziano ad aderire tra loro.

6.Immediately remove any excess of glue with a paper towel or suitable cloth. Stand by time before pressure application: 60 min per bar to be applied.

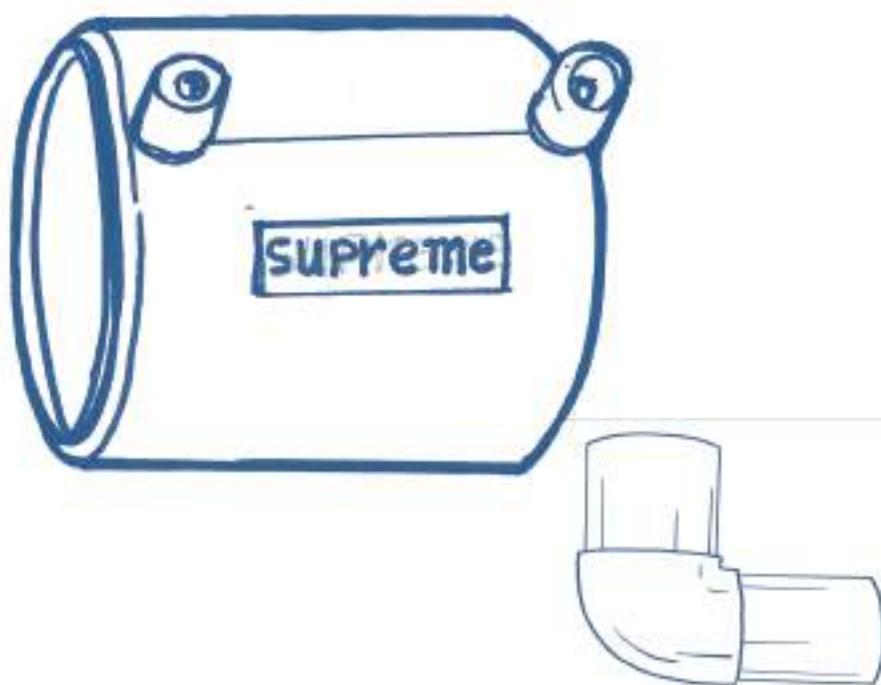

6. Rimuovere immediatamente ogni fuoriscita di colla con carta assorbente od idoneo panno. Tempo di attesa prima di pressurizzare: 60 min per ogni bar da applicare

INTRODUCTION - INTRODUZIONE

Normative - standard uni en 1555-3 - uni-en 12201-3 - uni en iso 15494 - iso 13950 barcode interleaved 2.5

Polyethylene (PE) is a thermoplastic that belongs to the group of polyolefines. Partially crystalline, it is an environmentally compatible product. In comparison to other thermoplastics, PE shows essential advantages which make it specially suitable for water and gas distribution applications, but can also be used in irrigation systems, industrial facilities or in building installations. Also described as third generation polyethylene types (or MRS 10), offers higher density and therefore improved mechanical properties to previous developments (PE 80 / PE63). The employed PE-material complies with the requirements of EN 12201 (plastic pipe systems for drinking water supply) and EN 1555 (plastic pipe systems for gas supply).

Technical specifications

Technical data

- Density according to ISO 1183 930 kg/m³.
- Melt-flow index according to ISO 1133: 0,3-0,5 g/10 min.
- Longitudinal expansion coefficient according to DIN 53572 - 0,13 mm/m.k.
- Colour: black

Geometric properties and nominal pressures

- Outside diameter and wall thickness according to EN 1555 and EN 12201.
- Outside diameter/wall thickness ratio SDR with nominal pressure PN: PE 100 SDR 11 PN 16 - PE 100 SDR 17 PN 10

Unions

- By electrofusion or butt welding.
- PE 100 fittings can be welded in the MFR-range [0,3 - 0,5] g/10 min., with all tubes in conformity with the standards EN 12201 and EN 1555.

Advantages of PE

- High resistance to impact and corrosion (very good chemical resistance).
- Flexibility (suitable for underground piping).
- Low weight (cost-saving in transport and handling).
- Thermal resistant (up to 80°C and low temperatures).
- Less frictional resistance avoids deposits/residue effects.

Il Polietilene è un termoplastico che appartiene alla categoria dei poliolefini. Parzialmente cristallino, è un prodotto ambientalmente compatibile. In comparazione con altri termoplastici, il PE presenta essenziali vantaggi che lo rendono particolarmente adatto per applicazioni di distribuzione acqua e gas, ma può essere utilizzato nei sistemi di irrigazioni, in impianti industriali o in installazioni edilizie. Descritto come tipo di polietilene di terza generazione (o MRS 10), offre una maggiore densità e quindi migliori proprietà meccaniche rispetto agli sviluppi precedenti (PE 80 / PE 63). Il materiale è in linea con la normativa EN 12201 (sistemi di tubazioni plastici per acqua potabile) e EN 1555 (sistemi di tubazioni plastici per fornitura gas).

Caratteristiche e vantaggi

Dati Tecnici

- Densità in linea con ISO 1183 930 kg/m³
- Melt-flow index in linea con ISO 1133: 0,3-0,5 g/10 min
- Coefficiente di espansione longitudinale in linea con DIN 53572 - 0,13 mm/m.k
- Colore: nero

Proprietà Geometriche e pressione nominale

- Diametro esterno e spessori in linea con EN 1555 e EN 12201.
- Rapporto Diametro esterno/spessore SDR con pressione nominale PN: PE 100 SDR 11 PN 16 - PE 100 SDR 17 PN 10

Collegamenti

- Eletrofusione o testa a testa.
- I raccordi PE 100 possono essere portati in temperatura in linea con MFR-range [0,3 - 0,5] g/10 min., con tutti i tubi in conformità ad EN 12201 and EN 1555

Vantaggi del PE

- Ottima resistenza chimica
- Flessibilità
- Basso peso e vantaggi di trasporto ed handling
- Resistenza termica (fino a 80°C e alle basse temperature)
- No effetto depositi/residui

PE 100 Electro - Fusion Fittings Installation and welding supremefittings

S16

1. Verify the external diameter, thickness and ovalization of the pipe according to relevant pipe standards. Prepare the elements to be welded in order to make the ends smooth and orthogonal to their own axe. Mark the inserting depth on the pipe (equal to 1/2 of fitting length). Eliminate the dirt and the oxidation on the welding zone scraping with a suitable tool (*, **) the whole circumference of the pipe, checking that the scraped part is more than the insertion depth (>10mm)

*suitable tool for small pipes

**suitable tool for medium and big pipes

2. Clean the external surface of the pieces to be welded and the internal surface of the electrofusion fitting using clean and not frayed cloths drenched with specific clearing liquid agent, wait for the surfaces became dry. Insert the pipe till the stop of the EF fitting.

3. Avoid every kind of movements in the welding zone during the fusion and the cooling with the aid of a specific die sets.

4. Connect the clamps of the feeding cables to the fitting using the adaptor pins. Please always check the welding parameters. The electrical data required for welding are automatically introduced in the welding apparatus through the optical bar code.

They can also manually enter (voltage and welding time are indicated in the barcode itself)

Before starting the welding, verify that the welder's connectors are correctly drafted on the fitting connectors. After fusion: Check that fusion Indicators have got up on fitting ,meaning that a correct welding has been done, then remove the cables. Wait for cooling time indicated on fitting label.

EQUIPMENT

Installazione e saldatura Raccordi in PE 100 Elettrosaldabili suprem[®] fittings

1. Verificare che il diametro esterno, lo spessore e l'ovalizzazione del tubo siano in accordo con gli standard vigenti. Predisporre gli elementi da saldare in modo tale che le estremità siano piane ed ortogonali al proprio asse. Marcare la profondità di inserimento sul tubo. Eliminare la sporcizia e l'ossidazione nella zona da saldare raschiando con apposito strumento (*, **) tutta la circonferenza del tubo, verificando che il tratto raschiato sia maggiore della profondità di inserimento (>10mm)

*strumento per tubi
diametri piccoli

**strumento per tubi
diametri medio/grandi

2. Pulire la superficie esterna degli elementi da saldare e quella interna del raccordo elettrosaldabile utilizzando stracci puliti senza sfilacci, imbevuti di specifico liquido detergente; attendere che le superfici siano ben asciutte. Inserire il tubo fino all'arresto del raccordo elettrosaldabile.

3. Evitare ogni tipo di sollecitazione nella zona di saldatura durante la fusione ed il raffreddamento mediante l'ausilio di specifico allineatore..

4 Collegare i morsetti dei cavi di alimentazione con il raccordo utilizzando gli appositi adattatori. Verificare sempre i parametri di saldatura. I dati elettrici necessari per la giunzione vengono introdotti automaticamente nell'apparato di saldatura mediante il lettore ottico dei codici a barre.

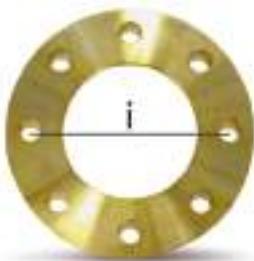

E' inoltre possibile inserire manualmente i dati di saldatura (tensione elettrica e durata di saldatura contenuti nel codice a barre).

Prima di avviare la saldatura, verificare che i connettori della saldatrice siano correttamente innestati sui piolini del raccordo. Dopo la saldatura verificare che gli indicatori di fusione si siano sollevati- a significare la corretta avvenuta fusione- quindi rimuovere i connettori ed aspettare il tempo di raffreddamento indicato sull'etichetta prima di utilizzare l'impianto.

EQUIPMENT

THREADED FITTINGS SELF SEAL

RACCORDI FILETTATI CON O-RING

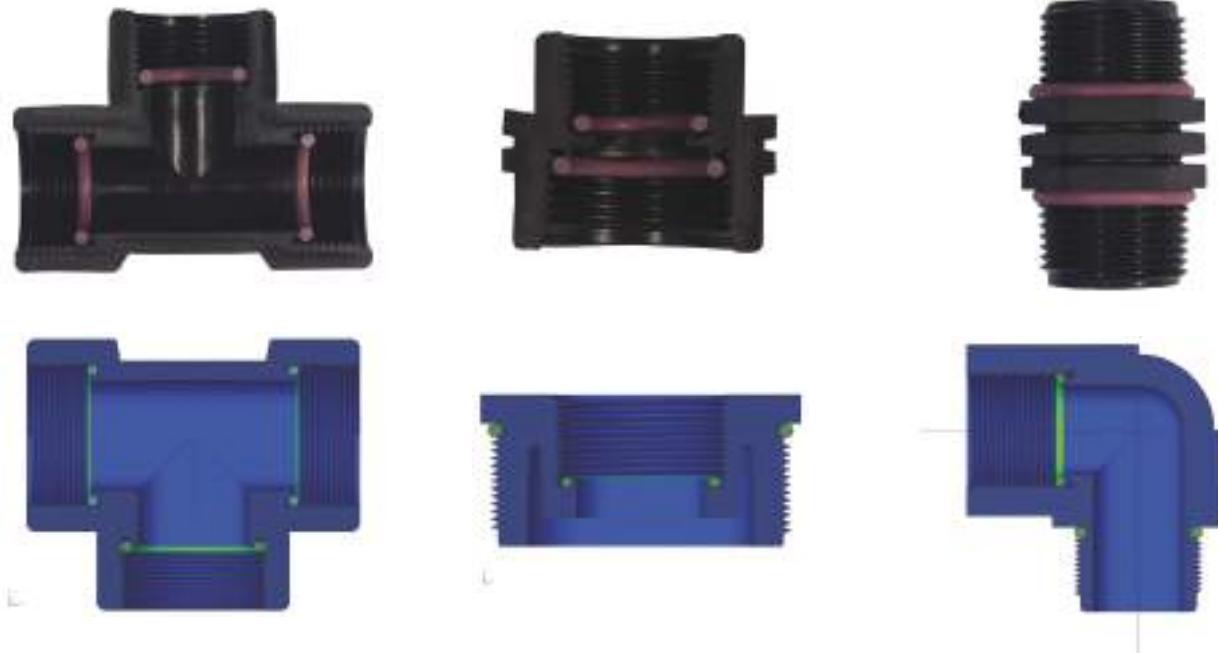

NEW

Material: PP
O-ring: EPDM
Threads: BSPT
Nominal pressure: 16b
Fertilizer Resistant
Available for a basic range of threaded fittings

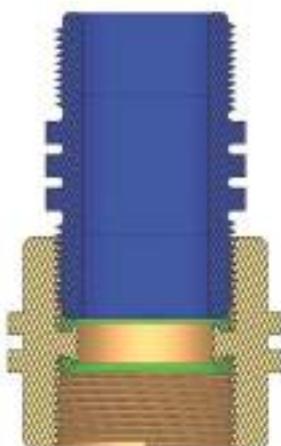

Save labour and teflon tape
Tighten by hand only
Fool proof using male to female assembly
To order: add "OR" to standard fittings code
Price list upon request

Materiale: PP
O-ring: EPDM
Filetti: BSPT
Pressione Nominale: 16b
Resistente ai fertiflizzanti
Disponibili per una gamma limitata di raccordi filettati

Si risparmia tempo e teflon
Si stringono anche solo a mano
Totale sicurezza accoppiando self seal maschi e femmine
Per ordinare aggiungere "OR" al codice standard
Listino prezzi su richiesta

Disk and Screen Filters - Fitri a Dischi ed a Rete

available upon request - disponibile su richiesta

NEW

S16

Caratteristiche:

Facile manutenzione
Unici: installazione veloce con raccordi ghiera folle
Resistenze a sostanze chimiche e fertilizzanti
Elementi di filtrazione intercambiabili: dischi e schermi compatibili con lo stesso corpo-filtro, con direzione opposta del flusso
Applicazioni: filtrazione d'acqua in agricoltura, irrigazione giardini, industriale, domestica

Features:

Easy maintenance.
Unique: swivel quick installation.
Chemical and fertilizer resistant.
Interchangeable filtration elements: Disk and Screen elements fit same filter body, with opposite flow direction.
Application: Water filtration for Agriculture, landscape, industrial and domestic.

Specifiche tecniche:

Materiali: vedere la prossima pagina
Pressione Nominale: 10b
Filetti: BSP
Dimensioni: 3/4" ÷ 2"
Portata: 5-20 Cum/h
Elementi di filtrazione: Dischi, rete in Nylon/acciaio inox
Campo di filtrazione: 40 ÷ 200 mesh

Technical specification:

Materials: See next page.
Max. Working pressure: 10kg/cm².
Threads: B.S.P.T or N.P.T.
Sizes: 3/4-2".
Flow rate: 5-20 Cum/h.
Filtration elements: Disk, Nylon/Stainless steel screen.
Filtration range: 40-200 mesh.

Male 2" Disk Filter

Swivel 2"
Inox Screen Filter

Compact Swivel Filter
1 1/2"

Swivel 1"
Disk Filter

Male 1"
Nylon Screen Filter

All filters available in male and swivel connection

Tutti i filtri disponibili con connessione maschio e ghiera folle

Applications:

Water filtration for Agriculture, Turf, domestic and industrial applications.

Applicable for wide range of flows.

Technical Specifications:

Max. Working pressure, Filter is offered in two models:

- 10 bar (140 psi) Black body and Cup.
- 6 bar (95 psi) Grey body and Cup.

Flow rates: up to 50 m³/h (220 gpm).

Available sizes: 1"S, 1 1/2", 2"S, 3".

Models 2"S, 3" are offered in T and in line configurations.

Filtration elements: Stainless Steel weave wire screen or Grooved plastic discs.

Filtration range: 40 – 200 mesh (425 -70 micron)

Threads: B.S.P.T. or N.P.T.

Applicazioni:

filtrazione d'acqua per agricoltura, irrigazione professionale e domestica.

utilizzabile per ampia gamma di portate.

Specifiche Tecniche:

Massima pressione di lavoro, filtri disponibili in due modelli:

- 10 bar (140 psi) corpo e tappo neri.
- 6 bar (95 psi) corpo e tappo grigio.

Portate : fino a 50 m³/h (220 gpm).

Misure disponibili : 1"S, 1 1/2", 2"S, 3".

Modelli 2"S, 3" sono disponibili nella configurazione a T ed in LINEA.

Elementi filtranti: rete in acciaio inox o disco in plastica .

Gamma di filtrazione: 40 – 200 mesh (425 -70 micron)

Filetti: B.S.P.T. or N.P.T.

High Flow Level Regulators - Regolatori di livello ad alta portata

SUPERFLOW

This Automatic level control regulates the filling of a tank stopping when it reaches desired level. Designed for installation laterally to the tank, above the water level or submerged. Work from 0,2 to 12b, flow rate of 220 l/min at 6b. Supplied male thread 1" BSP. Max water temperature: 60°C; Min water temperature: 1°C

Questo regolatore automatico di livello controlla il riempimento di un serbatoio, fermandolo quando raggiunge il livello desiderato. Studiato per essere installato lateralmente al serbatoio, sopra il livello dell'acqua o sommerso. Lavora da 0,2 a 12b, portata di 220 l/min a 6b. Fornito con uscita 1" maschio BSP. Max temperatura dell'acqua: 60°C; Min temperatura dell'acqua : 1°C

XTRAFLOW

This Automatic level control regulates the filling of a tank stopping when it reaches desired level. The closure is rapid thanks to the incorporated diaphragm valve with mechanical control. Designed for installation laterally to the tank, above the water level or submerged. Work from 0,3 to 12b, flow rate of 350 l/min at 6b. Supplied BSP male thread 1". Max water temperature: 60°C; Min water temperature: 1°C

Questo regolatore automatico di livello controlla il riempimento di un serbatoio, fermandolo quando raggiunge il livello desiderato. Chiusura rapida grazie alla valvola a diaframma con comando meccanico incorporata. Studiato per essere installato lateralmente al serbatoio, sopra il livello dell'acqua o sommerso. Lavora da 0,3 a 12b, portata di 350 l/min a 6b. Fornito con uscita da 1" maschio BSP. Max temperatura dell'acqua: 60°C; Min temperatura dell'acqua : 1°C

BALL VALVES - VALVOLE A SFERA

Ball Valves very resistant to low temperature and tested in freezing conditions.

For use with drinking water. Tested individually by hand using both air and water.

Great resistance to several cycles of closing / opening with a "click" warning of opening and closing of the valves.

Nominal pressure of 16 bar. / Removable handles for safety reasons. / UV-resistant materials. / Body and handle in nylon fiberglass reinforced, ball in PP and seat in acetal (POM); seals in nitrile rubber.

Valvole a sfera molto resistenti al freddo e testate in condizioni di gelo.

Utilizzabili con acqua potabile. Testate individualmente a mano utilizzando sia aria che acqua. Grande resistenza a numerosi cicli di chiusura/apertura con un "Click" che avverte sull'avvenuta operazione di apertura e chiusura della valvola.

Pressione nominale di 16 bar. / Maniglie removibili per ragioni di sicurezza. / Materiali resistenti agli UV. / Corpo e maniglia in Nylon rinforzato fibra di vetro, sfera in PP e sede in acetalica (POM); tenute in gomma nitrilica.

THREADED FITTINGS - RACCORDI FILETTATI

Threaded fittings in nylon reinforced with fiberglass, the most comprehensive range of high quality threaded fittings for drinking water, conform to worldwide requirements. These products have comparable mechanical strength to metal ones, with in addition the advantage of plastic materials as they do not generate oxide and iron hydroxide rust.

Material: PA (nylon reinforced fiber glass). The maximum permissible pressure depends on the size: see below detailed table.

All our fittings are suitable worldwide for drinking water: according to WRAS (UK), AS/NZS4020 (AUSTRALIA) requirements.

Raccordi filettati in Nylon rinforzato fibra di vetro, la gamma più completa di raccorderia filettata di altissima qualità per acqua potabile, conformi ai requisiti internazionali. Questi prodotti sono paragonabili per resistenza meccanica a quelli in metallo, con in più la prerogativa delle materie plastiche, perché non generano RUGGINE da ossido e idrossido di ferro. La pressione massima ammessa dipende dalle dimensioni, sotto la tabella dettagliata.

Raccordi compatibili al contatto con acqua potabile secondo i seguenti requisiti: WRAS (Gran Bretagna), AS/NZS 4020 (Australia).
